Dear Mr. Whittington:

Re: Permit Amendment Review, Construction of Solid Waste Dumps, U. S. Gypsum Company, Jumbo-Jensen Quarry, M/041/008, Sevier County, Utah

On October 15, 1992, the Division responded to your September 4, 1992 letter which requested approval of a new gypsum wallboard waste dump at the Jumbo-Jensen mine site (copy attached). To date, we have not received an answer to our letter.

Before we can continue to process your amendment request, we still need a general area map showing the dump location with relationship to the rest of the mine. We also requested a map showing more site specific detail of the dump site topography. If you can combine this information onto one map, this will be acceptable. In addition, please describe a specific reclamation approach for this dump area once it has reached its design capacity. We previously sent you a permit revision form (MR-REV) to help in answering the questions. If you need another form, please contact us.

Please provide the requested information at your earliest convenience. If you decide not to go ahead with this proposal, please notify us accordingly.

Sincerely,

D. Wayne Hedberg
Permit Supervisor

Dear Mr. Whittington:

Re: Amend to Plan, Construction of Solid Waste Dumps, Jensen Quarry, M/041/008,
Sevier County, Utah

The Division received your letter, dated September 4, 1992, requesting approval of a new gypsum board waste dump at the mine site. In order to process your request, we will need some more information concerning the area to be used for the dump.

I have enclosed form MR-REV to help in answering the remaining questions. Please pay special attention to # Section II - Maps. We will need a general area map (relationship to rest of mine) and something more specific showing the topography of the area of the dump site. If you can get it all onto one map, this will be acceptable. Also, please describe a specific reclamation approach for this area.

Thank you for your further assistance.

Sincerely,

Holland Shepherd
Senior Reclamation Specialist

Dear Mr. Braxton

amendment?

I am applying for a waste dumping variance to the approved Mining and Reclamation Plan submitted by United States Gypsum Company. This variance would consist of back-hauling gypsum board and ready mix production waste to the N-1 pit in the quarry. When the N-1 pit is filled to capacity, the area will be reclaimed as prescribed in the approved Reclamation Plan submitted by our company.

The gypsum board waste would be the great majority and consists of the following ingredients: 91% gypsum, 2% shale, anhydrite and other natural impurities in the rock, and 7% raw materials used to manufacture the board. The ready mix waste consists of the following ingredients: 70.2% gypsum, 23.3% water, and 6.5% raw materials to manufacture the ready mix. Other waste would be various paper and cardboard, plastic buckets and wood pallets. If a further breakdown of the raw materials is required or there are other questions, please contact Chuck A. Whittington at (801) 896-4484 Ext 40.

Thank You,

Chuck A. Whittington
